

ROADS & BRIDGES

At the time of merger of Pondicherry with the Indian Union in the year 1954, the total length of road network was in the order of 232 km with nearly two thirds of it unsurfaced. Rural areas did not have connectivity to the main roads. Due to successive five year plans, today all the 11 towns and 264 villages in the Union Territory are connected by a road network of total length 2292 km. Out of this, 601 km are PWD roads, all surfaced. The remaining 1691 km comes under local bodies of which 1231 km are surfaced and 460 km are unsurfaced as of 1998-1999. All the towns and villages in Union Territory of Pondicherry are well connected by roads coming under categories of National highways, state highways, District Roads and Rural roads. However, due to rapid urbanization, colonization and industrialization the traffic intensity has increased manifold resulting in traffic congestion, poor road/pedestrian safety, strain on public services, stress on road stability, overall degradation of road environment. Therefore, there is a need to upgrade and strengthen the existing roads to IRC standards in a comprehensive manner including widening (single lane to intermediate lane, intermediate lane to double lane and double lane to four lane), strengthening and standardizing the road pavements and junction geometrics, construction/reconstruction of bridges and culverts, subways. etc.

An "Integrated Traffic Engineering Study" is proposed to be entrusted on a consultancy to identify existing deficiencies in the road network and to prepare a detailed perspective plan of action addressing areas of concern such as road/pedestrian safety, taxation structure, cost effective technology in road making, control/removal of encroachments, unplanned ribbon development, uncoordinated cutting of roads for development of public utilities/services. This consultancy will also cover the possibility of elevated carriageway, intersection design improvements, over bridges, under passages and the like. Based on the study report comprehensive project proposals/reports will be prepared and implemented during 10th plan. Such of the projects which cannot be accommodated in the State Plan will be posed for external assistance.

The objective of this sector is to strengthen / standardize the road profile and to improve the riding surface, as per IRC standards, to increase the pavement width and to take up construction / reconstruction of road culvert and bridges, to construct upgrade and strengthen the existing roads and widening roads under the different categories of National Highways, State Highways, District Roads and Rural Roads.

Under the programmes implemented by the Local Administration Department it is proposed to connect the villages and habitations with link roads for which provision has been made it is also proposed to provide concrete roads to town limits of the regions of this Union Territory since Pondicherry is a Tourism spot of French Culture, tourists from other parts of the country as well as from abroad are visiting this town.
