

ANIMAL HUSBANDRY

The objectives are to have a higher level of technical and administrative set up at the head quarters as well as at the regional levels. Training / extension education about the latest technical knowhow in rearing livestock, feeding, breeding, management and disease control will be given to the poultry farmers. Meets and seminars in which lectures by experts to the livestock owners are given, screening educational films at the rural areas, arranging speeches through the electronic media, publication of booklets and pamphlets and distributing them to the livestock owners and also passing timely information on the outbreak of disease and guide them for adopting of suitable preventive measures will increase the productivity of farm animals. Introduction of e-governance was made to maintain transparency in administration to disseminate information to public.

The Livestock health delivery system being adopted by this department is of very intensive nature. The livestock health problems are effectively tackled in a regular and routine manner by the field level institutions established at strategic points in the Union Territory. On account of this intensive health coverage by way of treatment and control, this territory is free from any major diseases casualties during the last one and half decades.

Under cattle and Buffalo Breeding development programme, programmes are implemented for the betterment of milk producers wherein free breeding service with artificial insemination carried out for cattle and goat.

The sheep / goat development schemes are implemented with the objective to encourage farmers to rear sheep/goat by availing 75% subsidy for improving meat production and thereby contributing to the National Economy, to contribute a subsidiary self Employment, to improve Economic Status of the Farmers, to give assistance to SC widows to start mini dairy units of 3 milch cows with 100% subsidy.
